1. Simple Tasks

   a. Issue (1): Change the input type to "text" instead of "number".

   b. Issue (2): Simple CSS task; (if the status is pre-determined in the React).

   c. Issue (4): Simple CSS task; by assigning a: hover state with the "display: block" to the delete button.

   d. Issue (5): Simple CSS task by decreasing the margin or adding the subtitle next to the "h1" tag.

   e. Issue (6): Simple HTML task by editing the "option" tags in the React Code.

   f. Issue (11): Change the input type to "text" instead of "select".

   g. Issue (15): Set a default src for "no-img" case.

2. Moderate Tasks

   a. Issue (3): I think if we just changed the state with the new backup the page will not have to reload to show the new info.

   b. Issue (8): I will comment the two buttons if you want.

   c. Issue (10): Okay, I will change the "display" according to "role" state.

   d. Issue (12): Change the input type to "date" or try to add a React calendar plugin.

   e. Issue (13): I will use "useEffect" hook and turn the "branch" into a context to reach it from anywhere in the app.

   f. Issue (14): Edit the Date functions to specify which things to return.

3. Tasks I didn't fully understand:

   a. Issue (7): I think the "useEffect" Hook can be used to fetch or update lists (if that is what you mean).

   b. Issue (19) & Issue (20) & Issue (21): I will use the "useEffect" hook to dynamically fetch and change the "universities" and "programs" attached to it. I will go step by step with you to make sure on the right road.

4. Time-Consuming task:

   a. Issue (16): I will dynamically fetch them as mentioned per task.

   b. Issue (17): I will check the "id creator" function and check it's making a unique Id each time.

   c. Issue (18): I will apply the needed changes in one form and then copy paste it into other forms.
